- Young people in the youth justice system are 3 times more likely than their peers to have a mental health problem
- Children affected by learning disabilities are 3 times more likely to have a mental health problem
- Children from the poorest 20% of households are four times as likely to have serious mental health difficulties by the age of 11 as those from the wealthiest 20%

Mental Health Improvement & Early Intervention for Children and Young People

Mental Health Improvement and Early Intervention Framework for Children and Young People

Evidence demonstrates that there is no single intervention, therapy or programme that delivers mental wellbeing at a population level. Rather that children and young people require a number of prerequisites to develop resiliently and that these prerequisites span the school, family and community life of young people.

The strategy is underpinned by tackling poverty, disadvantage & inequalities as well as having Getting it Right for Every Child core values and principles at the heart of it.

mental wellbeing

Activities

Toolkit

This toolkit was developed to assist you, youth workers, when using digital approaches to youth mental health. It includes practical information, case studies, online resources and reflection material for anyone interested in learning more about new technology, health and wellbeing.

There are various separate chapters you can go through, online and printable. You can read these at your own time and pace. We encourage you to try out and test different online platforms with us.

Aye Mind does not offer direct support for mental health issues and is not continuously monitored for messages. If you need an ambulance, call 999. If you're in distress or need immediate help, [click here](#) to find a list of services you can talk to.
