Diabetes Type 1 Long Term Condition Review

Patient Initiated Follow-up (PIFU) Information Sheet

The Diabetes Department in NHS Greater Glasgow and Clyde has introduced a Patient Initiated Follow Up (PIFU) pathway for patients who have stable Diabetes conditions. It is designed to give you more control over the care that you receive. PIFU makes it easier for you to be seen quickly if or when you need it, but cuts down unnecessary outpatient visits if you keep well.
