NHS	NHS GREATER GLASGOW & CLYDE CONTROL OF INFECTION COMMITTEE STANDARD OPERATING PROCEDURE	Page Effective From	1 of 10 December 2020
Greater Glasgow and Clyde	MULTI-DRUG RESISTANT ORGANISMS (MDROs)	Review Date Version	December 2022 2

SOP Objective

To ensure that patients with MDRGNOs are cared for appropriately and actions are taken to minimise the risk of cross-infection.

This SOP applies to all staff employed by NHS Greater Glasgow & Clyde and locum staff on fixed term contracts and volunteer staff.

KEY CHANGES FROM THE PREVIOUS VERSION OF THIS SOP

- Updated wording in linen and patient clothing sections
- Updated Appendix 1

Important Note: The version of this policy found on the Infection Prevention & Control (eIPC Manual) on the intranet page is the <u>only</u> version that is controlled. Any other versions either printed or embedded into other documents or web pages should be viewed as uncontrolled and as such may not necessarily contain the latest updates, amendments, or linkages to other documents.

1. Responsibilities

Health Care Workers (HCW) must:

- Follow this SOP.
- Inform a member of the Infection Prevention and Control Team (IPCT) if this SOP cannot be followed.
- Implement Care Checklist

Senior Charge Nurses (SCN) / Managers must:

- Support HCWs and Infection Prevention and Control Teams (IPCTs) in following this SOP.
- Advise HCWs to contact the Occupational Health Service (OHS) as necessary.

Infection Prevention and Control Teams (IPCTs) must:

- Keep this SOP up-to-date.
- Provide education opportunities on this SOP.

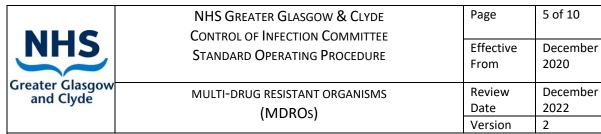

Occupational Health Service (OHS) must:

- Provide staff with advice as appropriate
- Support an Incident Management Team (IMT) with necessary investigations as required

Greater Glasgow and Clyde	MULTI-DRUG RESISTANT ORGANISMS (MDROs)	Review Date Version	December 2022 2

2. General Information on Multi-Resistant Organisms (MDRO)

Communicatela	Marki alama analistant hantada ana basta da that a sa sada a da t
Communicable	Multi-drug resistant bacteria are bacteria that are resistant to at
Disease / Alert	least three different antibiotics. These bacteria are commonly
Organism	found in the gut, where they do no harm; however, they can
	cause infection at other body sites, mainly in patients who are
	vulnerable due to other underlying diseases, injury or
	hospitalisation. Infection often happens when the bacteria enter
	the body through an open wound or via a medical device such as
	a catheter. These infections are difficult to treat, and can cause
	additional pain to patients with slow wound healing and other
	complications such as pneumonia or infection in the blood. This
	can prolong the length of stay in hospital and, in some cases, can cause death.
	MDROs include the following;
	Extended-spectrum beta-lactamase (ESBL) producers;
	Vancomycin-resistant Enterococci (VRE),
	Carbapenem-resistant organisms (CRO)
	(For CPE, MRSA and XDR Tb, please see appropriate IPC SOP).
	(
	Also included in this SOP are those exceptional organisms listed in
	Appendix 1
Clinical Condition	Patients may be colonised or infected with these organisms.
	Infections include but are not limited to bloodstream infections,
	device-related infections, pneumonia and wound infections.
Mode of Spread	This group of organisms are spread by multiple routes depending
	on their location in the body and the type of infection.
	Contact: Via hands or contaminated equipment and
	environment.
	Droplet: With respiratory infection, droplets from the respiratory
	tract can travel short distances during coughing and sneezing
	Airborne: Some respiratory MDROs spread by the airborne route
	while others can become airborne during aerosol generating
	procedures.
1	
Incubation period	No specific incubation period.
Incubation period Period of	No specific incubation period. As long as the organism is isolated.

Persons most at-risk	Patients in intensive care units, Renal Units, High Dependency
	Units (HDU) and haemato-oncology who have had a variety of
	antibiotics and/ or prolonged antibiotic therapy. Patients who
	have received medical care overseas

NHS	NHS GREATER GLASGOW & CLYDE CONTROL OF INFECTION COMMITTEE STANDARD OPERATING PROCEDURE	Page Effective From	6 of 10 December 2020
Greater Glasgow and Clyde	MULTI-DRUG RESISTANT ORGANISMS (MDROs)	Review Date Version	December 2022 2

The most up-to-date version of this SOP can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

3. Transmission Based Precautions for MDROs

Accommodation (Patient	Patients with infaction should be placed in a single ensuite room with	
Placement)	Patients with infection should be placed in a single ensuite room with the door close. Where isolation facilities are unavailable contact a	
riacementy	member of the IPCT who will provide advice on the most appropriate	
	placement. Patients colonised with VRE/ESBL should be discussed	
	with a member of the IPCT for the most suitable accommodation.	
Carro ab a abliat		
Care checklist	Yes	
Clinical Waste	Non-sharps waste should be designated as clinical/ healthcare waste	
	and placed in an orange waste bag. Please refer to the NHSGCC	
	Waste Management Policy	
Contacts	Contacts may be screened on the advice of a member of the IPCT.	
Domestic Advice	Domestic staff must follow the SOP for Twice Daily and Terminal	
	Clean of Isolation Rooms and ward. Cleans should be undertaken at	
	least four hours apart.	
	NHSGGC SOP Twice Daily Clean of Isolation Rooms	
	NHSGGC SOP Terminal Clean of Ward/Isolation Room	
Equipment	Where practical allocate dedicated equipment, e.g. own	
	washbowl, commode, moving sling or slip-sheet.	
	Decontaminate equipment as per the NHSGGC	
	<u>Decontamination Guidance</u>	
Hand Hygiene	Hand hygiene is the single most important measure to prevent cross-	
	infection. Hands must be decontaminated before and after each	
	direct patient contact.	
	Refer to the NHSGGC Hand Hygiene Guidance	
Last Offices	Please see last Offices in the National Infection Prevention and	
	Control Manual.	
Linen	Treat used linen as soiled/infected, i.e. place in a water soluble bag	
	then a clear plastic bag, tied and then into a laundry bag. (Brown bag	
	used in mental health areas)	
	Please refer to National Laundry guidance	
Moving between wards,	The patient should only be transferred to another department for	
hospitals and	essential procedures and investigations. All patient movement should	
departments (including	be kept to a minimum. Prior to transfer, the ward should inform the	
theatres)	receiving department, ward, hospital, health board, of the patient's	
	infectious condition. The receiving area should put in place	
	arrangements to minimise contact with other patients and arrange	
	for additional domestic cleaning if required.	
Notice for Door	Yes, yellow IPC notice

	7
Patient Clothing	If relatives or carers wish to take personal clothing home,
	staff must place clothing into a domestic water soluble bag then into
	a patient clothing bag and ensure that a Washing Clothes at Home
	<u>Information Leaflet</u> is issued. NB It should be recorded in the nursing
	notes that both advice and the information leaflet has been issued.
Patient Information	Inform the patient/ parent/ guardian/ next-of-kin (as appropriate) of
	the patient's condition and the necessary precautions. Answer any
	questions and concerns they may have.
Personal Protective	To prevent spread through direct contact PPE
Equipment (PPE)	(disposable gloves and yellow apron) must be worn for all
	direct contact with the patient or the patient's
	environment/equipment. If there is a risk of splashing/spraying of
	blood or body fluid a fluid repellent surgical face mask and eye
	protection should be worn. Fit tested FFP3 mask , disposable yellow
	apron and gloves must be worn if Aerosol Generating Procedures
	(AGP) are undertaken on a patient with a MDRO respiratory
	infection.
Precautions Required	Please contact your local IPCT for advice on when/if transmission
until	based precautions can be discontinued.
Specimens Required	Please contact your local IPCT for advice on which specimens are
	required and when (including readmission).
Terminal Cleaning of	Refer to NHSGGC SOP Terminal Clean of Ward/Isolation Rooms
Room	
Visitors	No specific restrictions. Encourage any visitors to undertake hand
	hygiene before and after visiting.

Appendix 1

Organisms	Exceptional phenotypes
Exceptional resistance phenotypes of Gram-negative	ve bacteria
Any Enterobacteriaceae	Resistant to colistin 1 (except <i>Proteus</i> spp, <i>Providencia</i> spp, <i>Morganella</i> spp and <i>Serratia marcescens</i>) Resistant to meropenem or is a carbapenemase producer
Salmonella typhi	Resistant to ceftazidime-avibactam Resistant to fluoroquinolones and/or carbapenems or azithromycin
Pseudomonas aeruginosa and Acinetobacter spp.	Resistant to colistin 1 Resistant to ceftolozane-tazobactam Resistant to a meropenem/imipenem AND ceftazidime AND piperacillin-tazobactam
Acinetobacter baumannii	Resistant to colistin 1 Resistant to meropenem or imipenem
Stenotrophomonas maltophilia	Resistant to co-trimoxazole
Haemophilus influenzae	Resistant to any 3rd/4th/5th generation cephalosporins or carbapenems
Moraxella catarrhalis	Resistant to any 3rd/4th/5th generation cephalosporins, carbapenems or fluoroquinolones
Neisseria meningitidis	Resistant to meropenem, any 3rd generation cephalosporins, fluoroquinolones or rifampicin
Neisseria gonorrhoeae	Resistant to spectinomycin and / or azithromycin and/or third-generation cephalosporins
Exceptional resistance phenotypes of Gram-positiv	e bacteria
Staphylococcus aureus	Resistant to vancomycin, teicoplanin, daptomycin (MIC > 4 mg/L), 2 linezolid, tedizolid, quinupristin-dalfopristin, tigecycline, ceftaroline or ceftobiprole
Coagulase-negative staphylococci	Resistant to vancomycin, daptomycin (MIC > 4 mg/L), 2 linezolid, tedizolid, quinupristin-dalfopristin, tigecycline, ceftaroline or ceftobiprole
Corynebacterium spp.	Resistant to vancomycin, teicoplanin or linezolid
Streptococcus pneumoniae	Resistant to carbapenems, vancomycin, teicoplanin, linezolid or rifampicin. Also isolates with high level penicillin resistance (MIC > 2 mg/L) and those intermediate or resistant to 3rd generation cephalosporins (MIC > 0.5 mg/L)
Group A, B, C and G β-haemolytic streptococci	Resistant to penicillin, cephalosporins, vancomycin, teicoplanin, dalbavancin, oritavancin, daptomycin, linezolid, tedizolid or tigecycline

NHS Greater Glasgow & Clyde Control of Infection Committee	Page	10 of 10
STANDARD OPERATING PROCEDURE	Effective From	December 2020
MULTI-DRUG RESISTANT ORGANISMS (MDROS)	Review Date	December 2022
(IVIDINOS)	Version	2

Enterococcus spp.	E. faecalis: Resistant to ampicillin/amoxicillin or daptomycin (MIC > 2 mg/L) E. faecium:	
	Resistant to daptomycin (MIC > 4 mg/L) All enterococci:	
	Resistant to tigecycline or linezolid	
Exceptional resistance phenotypes of anaerobes		
Bacteroides spp.	Resistant to metronidizole	
Clostridium difficile	Resistant to metronidizole, vancomycin.	
Exceptional resistance phenotypes of anaerobes		
Bacteroides spp. 3	Resistant to metronidizole	
Clostridioides difficile	Resistant to metronidizole or vancomycin	
Exceptional resistance phenotypes of Candida species		
Candida spp.	Resistant to amphotericin B or any echinocandin	
Candida albicans	Resistant to any azole (invasive isolates)	
Aspergillus fumigatus	Resistant to amphotericin B, echinocandins or azoles (excluding fluconazole)	

Notes

- 1. Colistin resistance should be determined locally by use of broth microdilution testing prior to sending to Glasgow Reference Laboratories for further confirmatory testing
- 2. Daptomycin MIC of > 4 mg/L is higher than that stated by EUCAST in relation to daptomycin resistance in staphylococci. This may be reviewed in the future.
- 3. This is not an exhaustive list of species where metronidazole resistance would be exceptional. N.B some anaerobes are intrinsically resistant to metronidazole e.g. *Actinomyces* spp.
