

Patient Presentation

Melanoma

Non symmetrical, irregular border, uneven distribution of colour & often greater than 5mm in diameter.

Suspected squamous cell carcinoma (SCC)

Rapidly growing nodule or ulcer

Basal cell carcinoma (BCC)

Slow growing ulcer with pearly edge

Primary Care

Suspected melanoma, squamous cell carcinoma (SCC) or basal cell carcinoma (BCC)

Referral to Plastic Surgery if any of the following:

- Presents on the face.
- Difficulty in direct closing of defect.
- Rapidly growing tumours.
- Any suspected metastatic skin cancer.

Diagnostic Tips

Melanoma

- Melanoma usually develop on sun exposed, sun damaged skin.
- New or existing lesions, usually but not always pigmented on any part of the body with one or more features:
 - History of change in the area, elevation or pigmentation.
 - history of unexplained itching, bleeding, oozing or altered sensation.
- OR
- Incidental lesion noted to be asymmetrical, irregularly outlined, variable in pigment or ulcerated.

Suspected squamous cell carcinoma (SCC)

- SCC usually develop on sun exposed, sun damaged skin.
- Men affected more than women especially on bald scalps.
- They may evolve from actinic keratoses.
- Suspect keratotic nodules with thickened base which are painful to the touch.
- Usually rapid growth compared with BCC.
- Metastases occur in 5% of squamous carcinoma.
- Organ transplant recipients are especially at risk.

Suspected basal cell carcinoma (BCC)

- BCC (rodent ulcer) is the most common skin cancer.
- 90% occur on head and neck on chronic light damaged skin.
- Slow growth often over several months or years.
- Non-healing ulcer which may bleed or crust.
- Skin coloured with pearly rolled edge.
- Less common variants include pigmented and morpoeic.

Plastic Surgery Consultant

Urgent Plastic Surgery Referral for suspected Melanoma & SCC and routine referral for suspected BCC if any of the following:

- Presents on the face.
- Difficulty in direct closing of defect.
- Rapidly growing tumours.
- Any suspected metastatic skin cancer.

Referral via SCI gateway or use the referral proforma and fax to:
0141 211 5859

Other suspected SCC & BCC see Dermatology guidance.
