

NHS GREATER GLASGOW & CLYDE BOARD INFECTION CONTROL COMMITTEE Effective From Review Dec 2024 Date

Norovirus Guidance Transmission Based Precautions

From
Review Dec 2024
Date
Version 7

The most up-to-date version of this guidance can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

Guidance Objective

To provide Healthcare Workers (HCWs) with details of the precautions necessary to minimise the risk of cross infection with Norovirus.

This guidance applies to all staff employed by NHS Greater Glasgow & Clyde and locum staff on fixed term contracts and volunteer staff.

This guidance applies to both confirmed and suspected outbreaks of Norovirus.

KEY CHANGES FROM THE PREVIOUS VERSION OF THIS GUIDANCE

Important Note: The version of this policy found on the Infection Prevention & Control (eIPC Manual) on the intranet page is the <u>only</u> version that is controlled. Any other versions either printed or embedded into other documents or web pages should be viewed as uncontrolled and as such may not necessarily contain the latest updates, amendments, or linkages to other documents.

Norovirus Aide Memoire

Consult guidance and Isolate in a single room with:

- ✓ ensuite / own commode
- √ door closed
- ✓ IPC yellow sign on door
- √ dedicated equipment
- ✓ Bowel Movement Record
- ✓ Loose Stools Care Checklist completed daily

Norovirus Guidance - Guidelines for patients in isolation:

Hand Hygiene: Liquid Soap and

PPE: Disposable gloves, yellow apron and fluid resistant surgical mask. Staff should risk assess the need for eye/face protection.

<u>Patient Environment:</u> Twice daily chlorine clean

<u>Patient Equipment:</u> Chlorine clean after use and at least on a twice daily basis

Laundry: Treat as infected

<u>Waste:</u> Dispose of as Clinical / Healthcare waste

<u>Disease Symptoms:</u> Diarrhoea and

vomiting

Incubation Period: 12 – 48 Hours

<u>Period of Communicability:</u> While symptomatic and up to 48hours

after symptoms.

Notifiable disease: No

<u>Transmission route:</u> Direct contact, indirect contact, droplet contact

Norovirus Guidance Transmission Based Precautions

The most up-to-date version of this guidance can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

1. Responsibilities

Healthcare Workers (HCWs) must:

- Follow this guidance.
- Inform their line manager if this guidance cannot be followed.
- Be vigilant for increased number of cases with similar symptoms and notify IPCT
- Implement care checklist

Senior Charge Nurse (SCN) / Managers must:

 Support HCWs and Infection Prevention and Control Teams (IPCTs) in following this guidance.

Infection Prevention and Control Teams (IPCTs) must:

- Keep this guidance up-to-date.
- Provide education opportunities on this guidance.
- Provide advice during outbreaks and incidents

Occupational Health Service (OHS) must:

 Advise HCWs regarding possible infection exposure and return to work issues as necessary

The most up-to-date version of this guidance can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

2. General Information on Norovirus

Communicatela	Nevertine is bighty infectious and servers sufficiently of		
Communicable	Norovirus is highly infectious and causes outbreaks of		
Disease/	gastroenteritis in places where people congregate, e.g. schools,		
Alert Organism	hospitals, nursing homes, cruise ships etc. Gastroenteritis		
	caused by Norovirus is usually self-limiting, mild to moderate in		
	severity and normally occurs during winter and early spring but		
	can occur throughout the year. The infective dose is very small,		
	between 10 – 100 virus particles. (HPS 2016).		
	Norovirus outbreaks usually require closure of wards to prevent		
	onward spread		
Clinical Condition	Gastroenteritis: Gastro-intestinal symptoms, e.g. nausea,		
	vomiting (often projectile), non-bloody watery diarrhoea;		
	characteristically lasting 12-48 hours. Also present may be		
	abdominal cramps, myalgia (muscle pain), headache, malaise		
	and low grade fever.		
Mode of Spread	Direct Contact:		
	Hands come into contact with faecal matter/ vomit and		
	subsequently touch the mouth.		
	Indirect Contact:		
	Hands come into contact with contaminated equipment or		
	contaminated surfaces and subsequently touch the mouth.		
	 Consumption of faecal contamination in food or water. 		
	Droplet Dissemination:		
	Patients with excessive or projectile vomiting can disseminate large quantities of virus in draplets which can contaminate.		
	large quantities of virus in droplets which can contaminate		
	extensive areas of the ward/department.		
	NB: Norovirus can survive on any surface including equipment		
	and on refrigerated food for up to 10 days.		
Incubation period	Usually 12-48 hours.		
Notifiable disease	No.		
Period of	During the acute stage of the disease and up to 48 hours after		
communicability	symptoms of diarrhoea and vomiting have resolved or stools		
	have returned to their normal (pre-infection pattern).		
Persons most at risk	All. Susceptibility is widespread. It should be noted that		
	mortality associated with Norovirus can occur particularly in		
	elderly patients with co-morbidities. (HPS 2016)

3. Transmission Based Precautions for Norovirus

	Precautions for Norovirus All patients symptomatic of unovalained veniting and/or			
Accommodation	All patients symptomatic of unexplained vomiting and/or			
(Patient Placement)	diarrhoea must be placed in a single room with en suite (or own			
	dedicated commode). If the patient is clinically unsuitable for			
	isolation, a risk assessment must be undertaken by the clinical			
	team. Failure to isolate must be documented in the IPC Care			
	Checklist and reviewed daily. If a single room is not available,			
	after consulting bed manager, staff must inform a member of			
	the IPCT to allow further assessment.			
IPC Care Checklist	Yes.			
available	Loose Stools Care Checklist			
Clinical / Healthcare	Waste should be designated as clinical/ healthcare waste and			
Waste	placed in an orange waste bag. Please refer to the NHSGCC			
	Waste Management Policy			
Domestic Advice	Patients room/bed space should be cleaned twice daily as			
	per NHSGGC SOP Twice Daily Clean of Isolation Rooms			
	Chlorine based detergents should be used for routine and			
	terminal cleaning of the area.			
	Blood and/ or body fluid contamination of the environment			
	should be managed as per the NHSGGC Decontamination			
	Guidance.			
	On resolution of symptoms (more than 48 hours			
	asymptomatic) or discharge home, patient room/ bed space			
	must be terminally cleaned see NHSGGC SOP <u>Terminal</u>			
	Clean of Ward/Isolation Room			
Equipment Patient equipment must be dedicated as far possible, whi				
	patient remains symptomatic and during infectious period.			
	Patient care equipment should be cleaned after use or twice			
	daily with chlorine based detergent or immediately if visibly			
	contaminated.			
	Where possible equipment such as commodes, call buttons,			
	washbowls, chairs, hoist slings, BP cuffs, thermometers etc.			
	should be kept for use by individual, symptomatic patients. If			
	equipment is taken out of the room it must be cleaned with			
	1000ppm chlorine based detergent.			
	Please also refer to NHSGGC Decontamination Guidance			
Hand Hygiene (HH)				
пини пуунене (пп)	Hand hygiene is the single most important measure to prevent cross-infection with Norovirus.			
	E DE POPULE E COSSEINI PETERON MOTO IMOTOMITIS			

NHS Greater Glasgow & Clyde **BOARD INFECTION CONTROL COMMITTEE**

7 of 12 Page Effective Dec 2022 From Review Dec 2024 Date Version

NOROVIRUS GUIDANCE TRANSMISSION BASED PRECAUTIONS

The most up-to-date version of this guidance can be viewed at the following web page:

www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control		
	Hands must be decontaminated with liquid soap and water before and after each direct patient contact, after contact with the environment, after exposure to body fluids and before any aseptic tasks. Patients should be encouraged/ assisted to use the hand hygiene facilities after using the toilet or commode and before meals. Hand wipes should be provided to those patients unable to use hand hygiene facilities	
	Visitors must also be encouraged to wash their hands with soap and water after visiting a patient with loose stools.	
	Please refer to NHSGGC <u>Hand Hygiene Guidance</u>	
Individual precautions required until	Patient has been asymptomatic for 48 hours.	
Last Offices	No special requirements.	
Linen	Treat used linen as soiled/ infected, i.e. place in a water soluble bag, then into a clear plastic bag (brown bag used in Mental Health areas), tied, then into a white laundry hamper bag. Some wards and departments may use red laundry hamper bags as the outer bag.	
	Please refer to <u>National Guidance on the safe management of linen</u>	
	Any soiled clothing for home laundering should be placed into a domestic water soluble bag then into a patient clothing bag before being sent home. All soiled clothing for home laundering should be accompanied with a Washing Clothes at Home Leaflet and staff should alert relatives / carers to the condition of the laundry. NB it should be recorded in the nursing notes that both advice and the information leaflet has been issued.	
Moving Patients between wards,	Movement of patients should be restricted until they have been asymptomatic for 48 hours. Movement of patients while	
hospitals and departments (including theatres)	symptomatic must only occur if there is a clinical need and this should be discussed with the IPCT and the receiving area.	
Notice for Door	The yellow IPC isolation sign must be placed on the door to the patient's room. In Mental Health Services, on advice of the IPCT. The door should remain closed and if the door cannot be closed,	

Page 8 of 12 Effective Dec 2022 From Dec 2024 Date Version 7

NOROVIRUS GUIDANCE TRANSMISSION BASED PRECAUTIONS

The most up-to-date version of this guidance can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

www.inisgge.see	t/nospitals-services/services-a-to-z/imection-prevention-and-control				
	then an IPCT risk assessment should be completed and reviewed frequently.				
Outbreak	If an outbreak is suspected, contact a member of the IPCT and refer to the NHSGGC Outbreak Incident Management Plan for				
	further guidance. Appendices 2 and 3 can be used to gather information during the outbreak.				
Personal Protective Equipment (PPE)	Disposable yellow aprons and disposable gloves must be worn if in contact with an infected patient or their environment. Where there is a risk of blood and / or body fluid splash to the face, a fluid resistant surgical mask and eye protection must be considered.				
Specimens required	Specimens of faeces must be obtained for microbiology and virology at the earliest possible opportunity. Both faecal and vomit specimens can be sent to virology.				
Stool Charts	It is the responsibility of staff within the area to record type/frequency of stool, using the appropriate stool chart. See Appendix 1 Bowel Movement Record				
Terminal Cleaning of Room	Refer to Terminal Clean of Ward/Isolation Room SOP				
Visitors	Visitors are not required to wear aprons and gloves, unless they are participating in patient care. Visitors must be advised to decontaminate their hands with liquid soap and water on leaving the room/ patient. Symptomatic visitors should be advised not to visit patients in hospital until they have been asymptomatic for 48 hours. Staff should consider restricting the number of visitors to two and advising visitors not to bring young children and babies to visit whilst the patient is symptomatic.
