INTRODUCTION

Perinatal Mental Health refers to mental health during pregnancy and up to one year after the baby is born. During this period new and expectant parents (mums, dads, co-parents, partners') can experience issues with their mental health. This includes mental illness existing before pregnancy, as well as illnesses that develop for the first time, or are greatly exacerbated in the perinatal period. These illnesses can be mild, moderate or severe, requiring different kinds of care or treatment. The stigma and fear associated with perinatal mental health can leave those affected feeling inadequate as a parent, isolated and vulnerable and can impede or delay getting help, treatment and recovery.

Infant Mental Health is the social, emotional and cognitive wellbeing and development of children in the earliest years of life. It is expressed in the infants capacity to form close relationships; experience, regulate and express emotions; and to explore their environment and learn. Infants achieve this through safe, nurturing and secure relationships.

Whilst the perinatal period can be a vulnerable time for all women and their families, research highlights that those with protected characteristics including women of colour, LGBTQ+ and young parents are at greater risk of developing mental health problems. Their vulnerability is further exacerbated due to additional factors of culture and ethnicity, stigma attached to mental health, language barriers, poverty, discrimination, lack of awareness of supports available and many more.

It is crucial that families are supported to have positive mental health and wellbeing during the perinatal period. Untreated perinatal mental health problems present a major public health concern and can have long-term impacts on the physical and mental health outcomes of mothers, babies, partners, and families.

This resource is intended to support Health Care Workers, Third Sector partners and any community organisations in contact with families during the perinatal period. The guide takes cognisance of the nine **protected characteristics** as set out in the **Equality Act (2010)** and gives suggestions as to what organisations might do to:

- Remove or minimise disadvantages suffered by new and expectant and parents and their infants due to their protected characteristics.
- Take steps to meet the needs of new and expectant parents and their infants from protected groups where are different from the needs of other people.
- Encourage new and expectant parents from protected groups to participate in activities where their participation is disproportionately low.

Although **poverty** itself is not a protected characteristic, it is an issue that affects all groups, cutting across protected characteristics. A section on financial inclusion/poverty has been included within this guide to recognise the impact poverty and financial challenges can have on mental health during the perinatal period.

For more information on Equalities and Human Rights visit: [NHSGGC - Equalities in Health](#)

A supporting Training Appendix is included which offers suggested learning opportunities for staff wishing to develop and increase their knowledge and understanding of Perinatal and Infant Mental Health.

Getting it Right for New and Expectant Parents Mental Health

Protected Characteristic	Good Practice	Supporting Resources	Purpose

Appendix 1: Training Information

Perinatal Mental Health Curricular Framework: a framework for maternal and infant mental health. This framework sets out the different levels of knowledge and skills required by members of the Scottish workforce who have contact with mothers and their babies, to enable them to support mothers, babies and their families to have positive well-being and good mental health during the perinatal period. **Click on the image to download the framework.**

TURAS Learn: is a content and learning management system that hosts learning materials for all health and social care staff and students in Scotland. On Learn users will find learning sites, eLearning modules, learning programmes and courses. The site hosts a range of maternal and infant mental health e-learning courses across the different knowledge levels. Staff will need to register with TURAS Learn to access, but anyone with an email address, no matter what their location or role is, can register free of charge.. **Click on the image to be directed to TURAS Learn.**

Infant Mental Health and Developing Positive Attachments: This learning resource aims to raise awareness, knowledge and confidence among a range of professionals and people who work with young children and families. **Click on the image to be directed to the resource.**
