RESPIRATORY SYNCYTIAL VIRUS (RSV) GUIDANCE

The most up-to-date version of this guidance can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

Guidance Objective

To provide Healthcare Workers (HCWs) with details of the precautions necessary to minimise the risk of RSV cross-infection.

This guidance applies to all staff employed by NHS Greater Glasgow & Clyde and locum staff on fixed term contracts.

KEY CHANGES FROM THE PREVIOUS VERSION OF THIS GUIDANCE

• Removal of Appendix 1 & 2

Important Note: The version of this policy found on the Infection Prevention & Control (eIPC Manual) on the intranet page is the <u>only</u> version that is controlled. Any other versions either printed or embedded into other documents or web pages should be viewed as uncontrolled and as such may not necessarily contain the latest updates, amendments, or linkages to other documents.

RESPIRATORY SYNCYTIAL VIRUS (RSV) GUIDANCE

The most up-to-date version of this guidance can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

Responsibilities

Healthcare Workers (HCWs) must:

- Follow this guidance.
- Inform their line manager if this guidance cannot be followed.

Managers must:

• Support HCWs and Infection Prevention and Control Teams (IPCTs) in following this guidance.

Infection Prevention and Control Teams (IPCTs) must:

- Keep this guidance up-to-date.
- Provide education opportunities on this guidance.
- Liaise with laboratory staff when appropriate.

Laboratory Staff must:

- Provide diagnostic service appropriate with prevailing epidemic conditions.
- Monitor quality of point of care testing on a daily basis (local policy / procedure may apply) and alert staff in the Short Stay Unit of false positive or negative results.

RESPIRATORY SYNCYTIAL VIRUS (RSV) GUIDANCE

The most up-to-date version of this guidance can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

General Information on RSV

Communicable Disease /	Respiratory syncytial virus (RSV).
Alert Organism	
Clinical Condition	Infections of the upper and lower respiratory tract (Bronchiolitis/pneumonia) in infants and young children. RSV may also cause upper respiratory tract infections and/or pneumonia in immunocompromised adults. RSV is a common cause of viral pneumonia in the elderly, particularly in nursing home outbreaks. RSV is also a major cause of asthmatic exacerbations and acute respiratory infections in the immunocompromised.
Mode of Spread	Respiratory route: Large particle aerosols (respiratory secretions) shed from the infected person and enter the host via mucous membranes of the eyes, mouth and nose. Contact route: Contaminated hands may also transmit the virus from patient-to-patient or equipment to patient. (RSV can survive for up to 30 minutes on hands, two hours on clothing and several hours on inanimate surfaces).
Incubation period	2-8 days, but usually 4-6 days. This may be shorter in immunocompromised patients.
Notifiable disease	No.
Period of communicability	One or two days before, and for the duration of symptoms, this is usually 7-10 days after the onset of illness. Some older patients may have mild symptoms but continue to pose a risk to more vulnerable patients.
Persons most at risk	 Children under 2 years. Children who are immunocompromised or who have underlying cardio-respiratory disease and those who were born prematurely. Adults who are immunocompromised. People with chronic heart and lung disease or frailty
In what areas does this policy apply	All acute paediatric wards and areas caring for high-risk patients (see above). Adult wards with severely immunocompromised patients and areas caring for high-risk patients.

Transmission Based Precautions for RSV in High-Risk Areas

Accommodation	Single room with ensuite is preferred but cohort areas can be used	
(Patient Placement)	when the patient's RSV status is known. If a single room is not	
,	available, an IPCT risk assessment is completed daily.	
Clinical Waste	Waste should be designated as clinical / healthcare waste and	
	placed in an orange bag. Please refer to the NHSGGC Waste	
	Management Policy	
Domestic Advice	Domestic staff must follow the NHSGGC SOP for Twice Daily Clean of Isolation Rooms. Cleans should be undertaken at least four hours apart. Cleaning of the room should also be undertaken	
	following each aerosol generating procedure.	
Equipment	Where practicable, the patient must be designated their own equipment. See NHSGGC Decontamination Guidance	
Hand Hygiene	Hands must be decontaminated before and after each direct patient contact, before and after aseptic tasks, after exposure to blood or body fluids and after contact with the environment regardless of whether personal protective equipment (PPE) is worn. Alcohol hand gel is effective if hands are visibly clean. See NHSGGC Hand Hygiene Guidance	
Linen	The risk from used linen is minimal however to prevent contamination of the environment and to comply with isolation procedures all used linen should be placed into a water soluble bag then into a clear bag (brown bag in mental health areas) and then into a laundry bag. Bed linen and patient clothing should be changed daily.

RESPIRATORY SYNCYTIAL VIRUS (RSV) GUIDANCE

The most up-to-date version of this guidance can be viewed at the following web page: www.nhsggc.scot/hospitals-services/services-a-to-z/infection-prevention-and-control

Precautions required until	Stop isolation when patient is 48hrs asymptomatic of respiratory symptoms. (If patient is ventilated or part of an ongoing incident, seek advice from a consultant microbiologist).
Specimens Required	 Gargles, throat swabs, NPA and NPS. Sputum, endotracheal secretions, BAL good for LRT infection (BALs, sputums and any mucoid samples will require additional processing by the laboratory prior to testing, with a result available within 24 - 48 hours) If a sample is to be processed urgently please contact the West of Scotland Specialist Virology Centre (WoSSVC) on 0141 201 8722/8721 to discuss turn-around-times and delivery of sample Once diagnosed RSV positive DO NOT sent repeat samples for testing, a patient can shed the virus for prolonged periods, as detected by PCR If a patient shows sudden deterioration or no improvement retesting may be considered. Please contact the WoSSVC to discuss before sending a repeat sample. For areas with Point Of Care Testing please follow the guidance on appropriate sample types
Terminal Cleaning of Room	Clean all surfaces and underneath surfaces with chlorine based detergent, warm water and disposable cloth. See <u>Twice Daily Clean of Isolation Room SOP</u> <u>Terminal Clean of Ward/Isolation Room SOP</u>
Visitors	Paediatrics: Only parents (or two designated guardians) will be allowed to visit the patient in isolation. Discourage visitors who have colds or other infectious respiratory conditions to visit wards with immunocompromised patients. Children less than two-years old should not be brought to visit a patient with RSV. All wards: Visitors should be discouraged from visiting if they have symptoms of respiratory tract infection.
